

## OIL TRADER FACILITY PRODUCT OVERVIEW

Utilising our considerable experience in the oil and oil trading sector, United Insurance Brokers have structured an extensive wording specifically for companies involved in this arena. The great significance of this facility is that it is purposely designed to react to barrel price change. The unique premium structure allows the insured to hedge the barrel price whilst still being able to make a fixed cost entry on their balance sheet.

### Coverage

Coverage for each risk, whether direct or on a reinsurance basis, is negotiated individually for each Insured and can range from basic Institute Bulk Oil Clauses to All Risks including Guaranteed Outturn and Contamination, wordings having been built over many years handling large state owned oil companies and trading houses.

At the outset of the contract, information will be provided to Insurers detailing barrel price, estimated volumes and anticipated turnover. These elements will form the basis of the premium adjustment feature.

If during the period of insurance the barrel price increases to realise a turnover of greater than 125% of the initial value, the Insured's premium will be capped at 125% of the premium that was expected from the original estimates irrespective of how much the barrel price has increased.

The facility offers additional price benefit in relation to volumes shipped. If the actual number of barrels shipped exceeds 150% of the number originally estimated, the premium required by underwriters will be capped at 75% of the amount of premium which would normally have been realised.

To demonstrate more clearly how the premium adjustment facility operates, please refer to the examples on page two of this fact sheet. The rating used in these examples merely illustrates the premium adjustment process and demonstrates the benefit of the facility to the insured. Each risk will be assessed on its own merits and an appropriate rating level established.

### Structure

We specialise in designing policies that have the flexibility to address any aspect of an Insured's risk profile. We arrange coverage which is pertinent to the Insured's unique exposures and operating practices. These policies will contain common terms and conditions for transit and stock exposures in order to avert any potential division of loss situations.

### Underwriter Security

The United Insurance Brokers Oil Trader Facility is offered by insurers who, like United Insurance Brokers, have extensive knowledge in this class of business. The participating Insurers are rated at least A- by Standard & Poor's.
